

We live in a rural area and the radio services we receive from standard radio stations leave much to be desired. XM allows us to receive a wide variety of stations and let us decide on what genre of music to listen to. The quality of reception is much better with XM than with standard radio.

The weather and traffic updates are more constant and more useful with XM than with standard radio. They are of more use in helping us with traffic and/or weather conditions when we travel.

Please don't take this service away from us. We are tired of listening to radio commercials and static.
